

PRODUCT GUIDE

DragonBench
HEATED OUTDOOR SEATING

Commercial heated seating

Direct, controlled warmth for outdoor spaces

HEAT THE SEAT. NOT THE SPACE.

dragonbench.co.uk

Designed and manufactured in the UK

The DragonBench range

Two standard ranges, with options for different spaces, finishes and installations.

Choose DragonBench Steel for durable, low-maintenance outdoor seating, or DragonBench Cushion for a softer upholstered finish. Both are available in three standard sizes. Custom dimensions, finishes and integration are also available.

Steel

Permanent stainless-steel heated seating for exposed outdoor settings where durability and low maintenance matter.

AT A GLANCE

- Standard lengths: 1.2 / 1.6 / 2.0 m
- 2 / 3 / 4 seats

DETAILS AND SPECIFICATIONS: PAGE 6

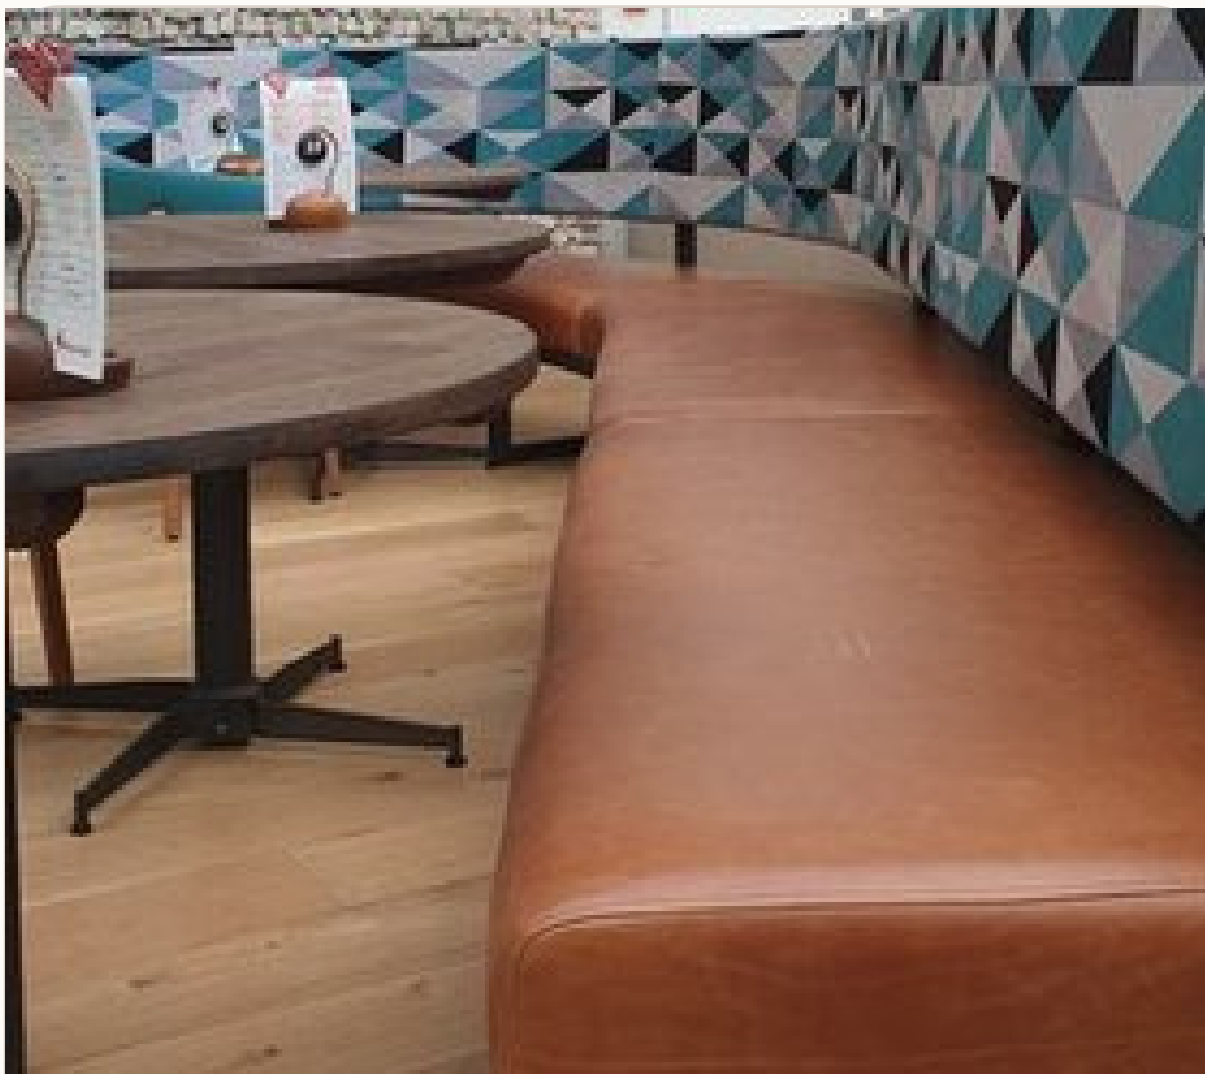

Cushion

Waterproof, commercial-grade upholstered seating combining a softer finish with heated seat and backrest.

AT A GLANCE

- Standard lengths: 1.2 / 1.6 / 2.0 m
- Woven fabrics or vinyl

DETAILS AND SPECIFICATIONS: PAGE 7

Custom

Adaptations across Steel and Cushion, most commonly as upholstered seating integrated into new furniture.

OPTIONS INCLUDE

- Custom dimensions and finishes
- Integrated seating or suitable retrofit

OPTIONS AND CUSTOMISATION: PAGE 8

Steel and Cushion. Standard or adapted

Standard Steel and Cushion models cover most requirements. Where a project needs something different, dimensions, finishes and integration can be adapted.

Why heated seating?

Heating the seat rather than the space.

Patio and radiant heaters project heat across the surrounding area. Outdoors, much of that energy is dispersed into open space.

DragonBench delivers warmth through the seat and backrest instead, placing it in direct contact with the person using it.

The result is immediate comfort without the glare and intensity of radiant heaters, and with far lower energy demand than conventional outdoor heating.

DRAGONBENCH • TECHNICAL

Where the energy goes

Direct surface heating concentrates warmth at the point of use.

Patio heater

WARMS THE SURROUNDING SPACE

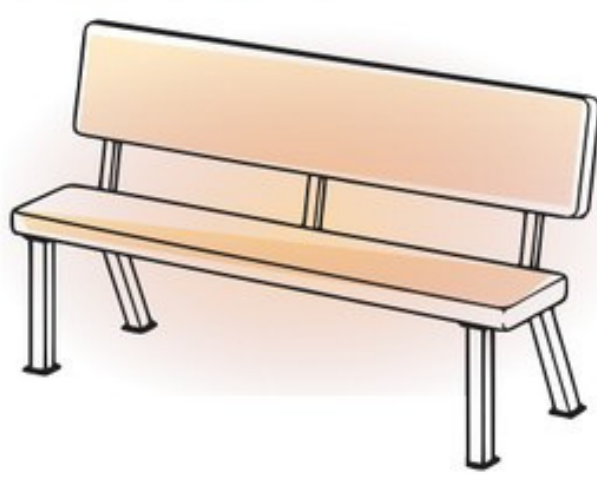

Heat is dispersed through the air, warming occupied and empty space.

More affected by wind

Higher typical demand

DragonBench

WARMS THE SEATING SURFACE

Heat passes through the seat and backrest, placing warmth close to the occupant.

Targeted warmth

Lower typical demand

Direct, targeted warmth

Far less affected by wind

Less energy spent heating empty space

Illustrative comparison—not to scale. Actual energy use varies with product, conditions, settings and usage.

Heat where it is needed. Not where it is lost.

Rapid warmth.
Lower energy demand.
Effective outdoor performance.

Commercial benefits

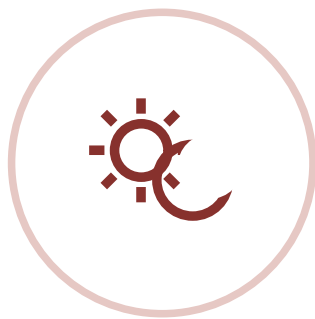

Helping outdoor spaces work harder.

DragonBench makes outdoor seating useful for more of the year. It helps venues get more from their space, strengthens street presence and gives customers a warmer, more memorable place to sit.

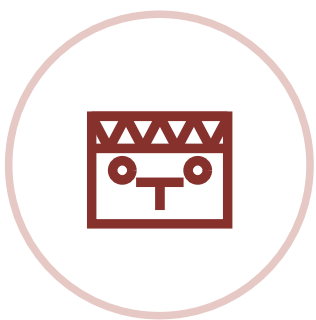

Making more of outdoor space

Extends the useful season and makes terraces more inviting on cooler days and evenings.

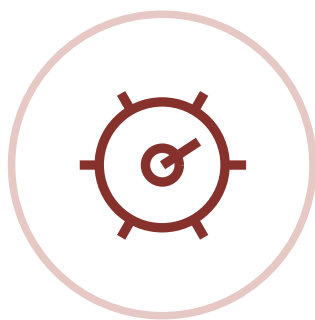

Effective beyond winter

Beneficial on cool spring and summer evenings as well as during the colder months.

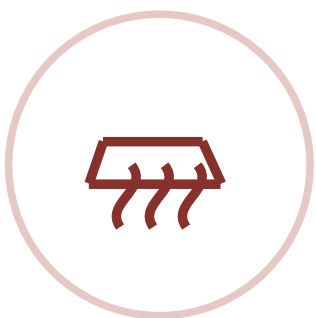

Kerb appeal

Active outdoor seating creates atmosphere, strengthens street presence and can attract passing trade.

Automatic adjustment

Auto-Temp responds as ambient conditions change, requiring no staff input.

Direct warmth

Warmth passes through the seat and backrest without trying to heat the surrounding air.

A distinctive experience

A memorable amenity that improves the guest experience and helps a venue stand apart.

PROVEN IN HOSPITALITY, LEISURE AND PUBLIC SETTINGS

Places made more inviting

Durable heated seating for places where people gather, relax and socialise.

From restaurant terraces to railway concourses, DragonBench makes seating more comfortable when temperatures fall. It can be supplied as a complete bench or integrated into purpose-designed furniture, so the seating remains true to the character of its setting.

Hospitality

Restaurants, pubs, cafes, hotels and terraces.

Leisure

Golf facilities, sports venues and visitor attractions.

Public realm

Universities, transport hubs and commercial developments.

Residential and community

Gardens, care homes, churches and communal settings.

DragonBench Steel

Durable, low-maintenance heated seating for permanent outdoor settings.

DragonBench Steel is built for permanent outdoor installation. Its stainless-steel seat and backrest deliver warmth directly to the user, while its robust, low-maintenance construction is designed for year-round commercial use.

Available in three standard lengths, Steel can be specified in a natural leathergrain stainless-steel finish or a textured powder coat. Every bench is supplied as a complete system, including temperature sensing, DragonBench control and installation information.

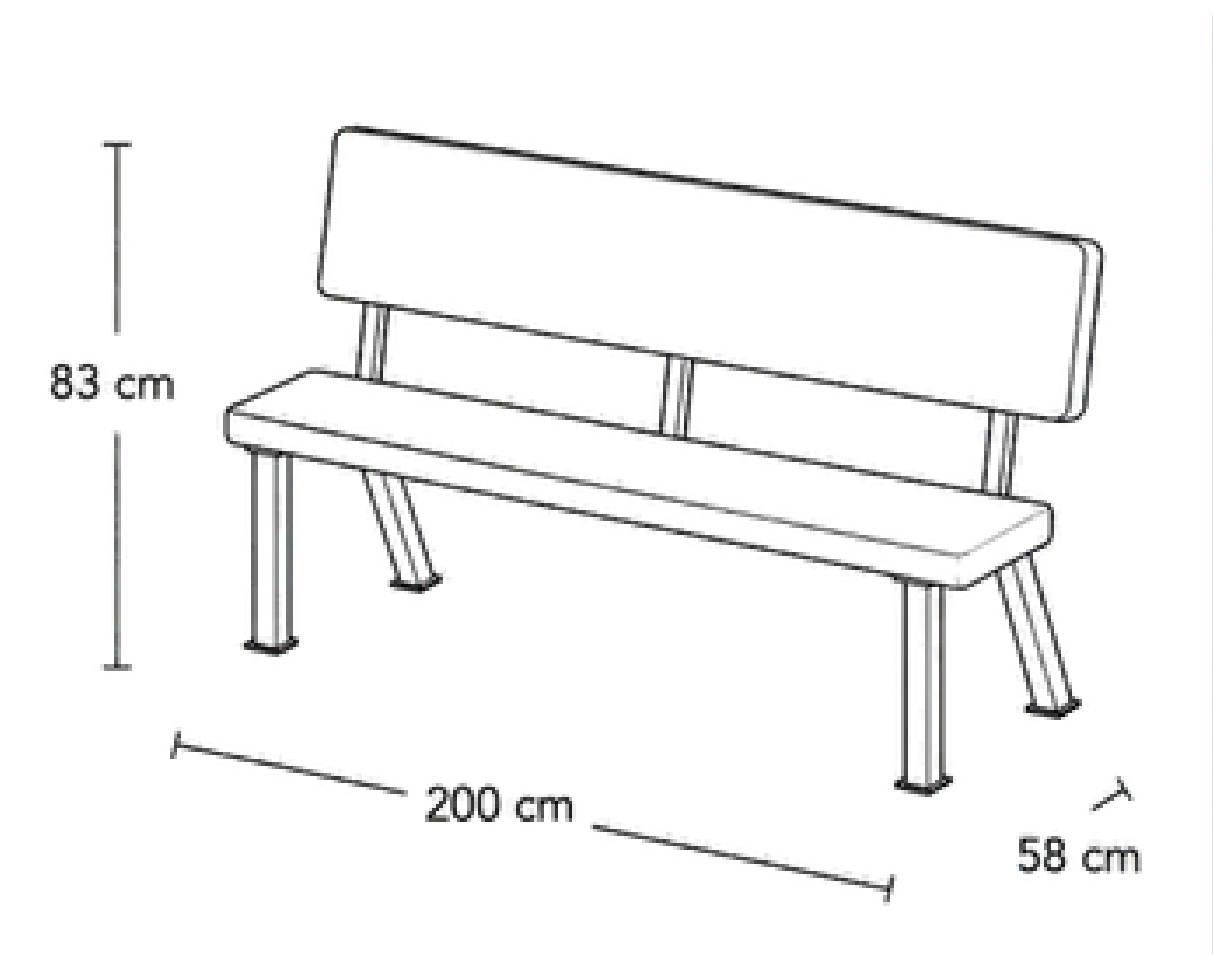

KEY FEATURES

- Permanent outdoor construction
- Stainless-steel seat and backrest
- Low-maintenance surfaces
- Powder-coated or stainless-steel finishes

Textured and coloured stainless steel carry a supplement.

DragonBench Cushion

Waterproof, commercial-grade upholstered seating with warmth built in.

DragonBench Cushion combines the comfort and visual appeal of upholstered seating with warmth delivered directly through the seat and backrest.

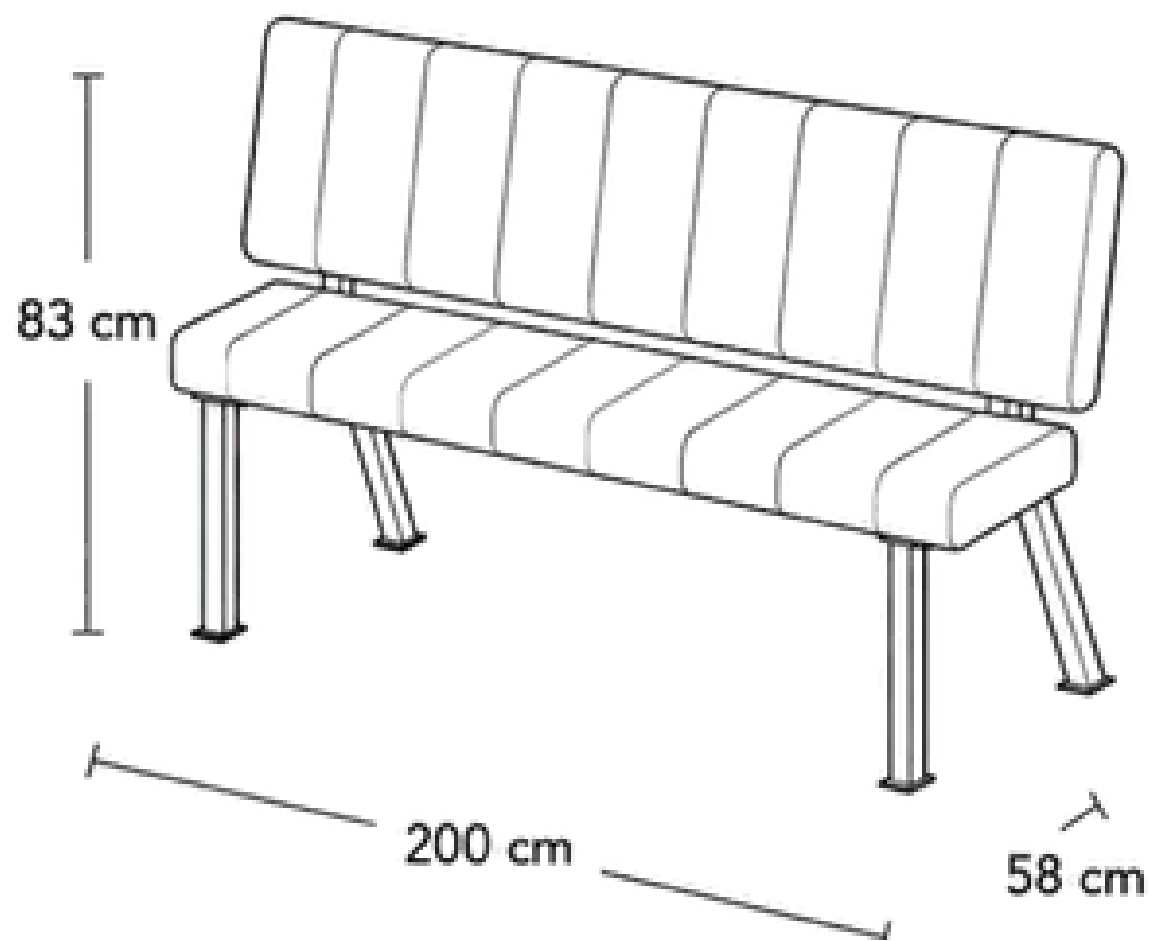

It can be supplied as a complete bench or as heated seating sections for furniture supplied by others. Waterproof woven fabrics and commercial-grade vinyl offer a wide choice of colours and finishes, with the controls and wiring coordinated neatly into the installation.

- KEY FEATURES
- Waterproof commercial-grade upholstery
 - Soft, upholstered finish
 - Wide choice of fabrics, vinyls and colours
 - Complete benches or integrated seating sections

Options and customisation

Custom dimensions, finishes and integration for Steel and Cushion.

Standard Steel and Cushion models cover most installations, with custom dimensions, finishes and integration also available.

Most custom work uses the Cushion system, integrated into new furniture or suitable existing seating, although selected Steel dimensions and finishes can also be adapted.

- **Custom dimensions and finishes**

Developed to suit the furniture, setting and intended use.

- **Integration into new furniture**

Heated seating sections concealed within the finished upholstery.

- **Suitable retrofit projects**

Heating integrated where the design and construction of existing seating permit.

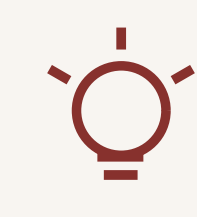

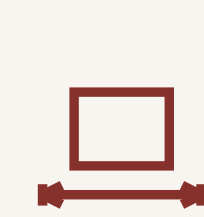

FINISHES

- Natural leathergrain stainless steel
- Textured powder-coated finishes
- Other colours and patterns on request

UPHOLSTERY

- Waterproof woven fabrics
- Commercial-grade vinyl
- A wide choice of collections and colours

AVAILABLE OPTIONS

-  LED lighting
-  USB charging
-  Branding panels
-  Custom dimensions

Warmth is the feature. The technology remains discreet.

Energy performance

Targeted warmth uses less energy than heating the surrounding air.

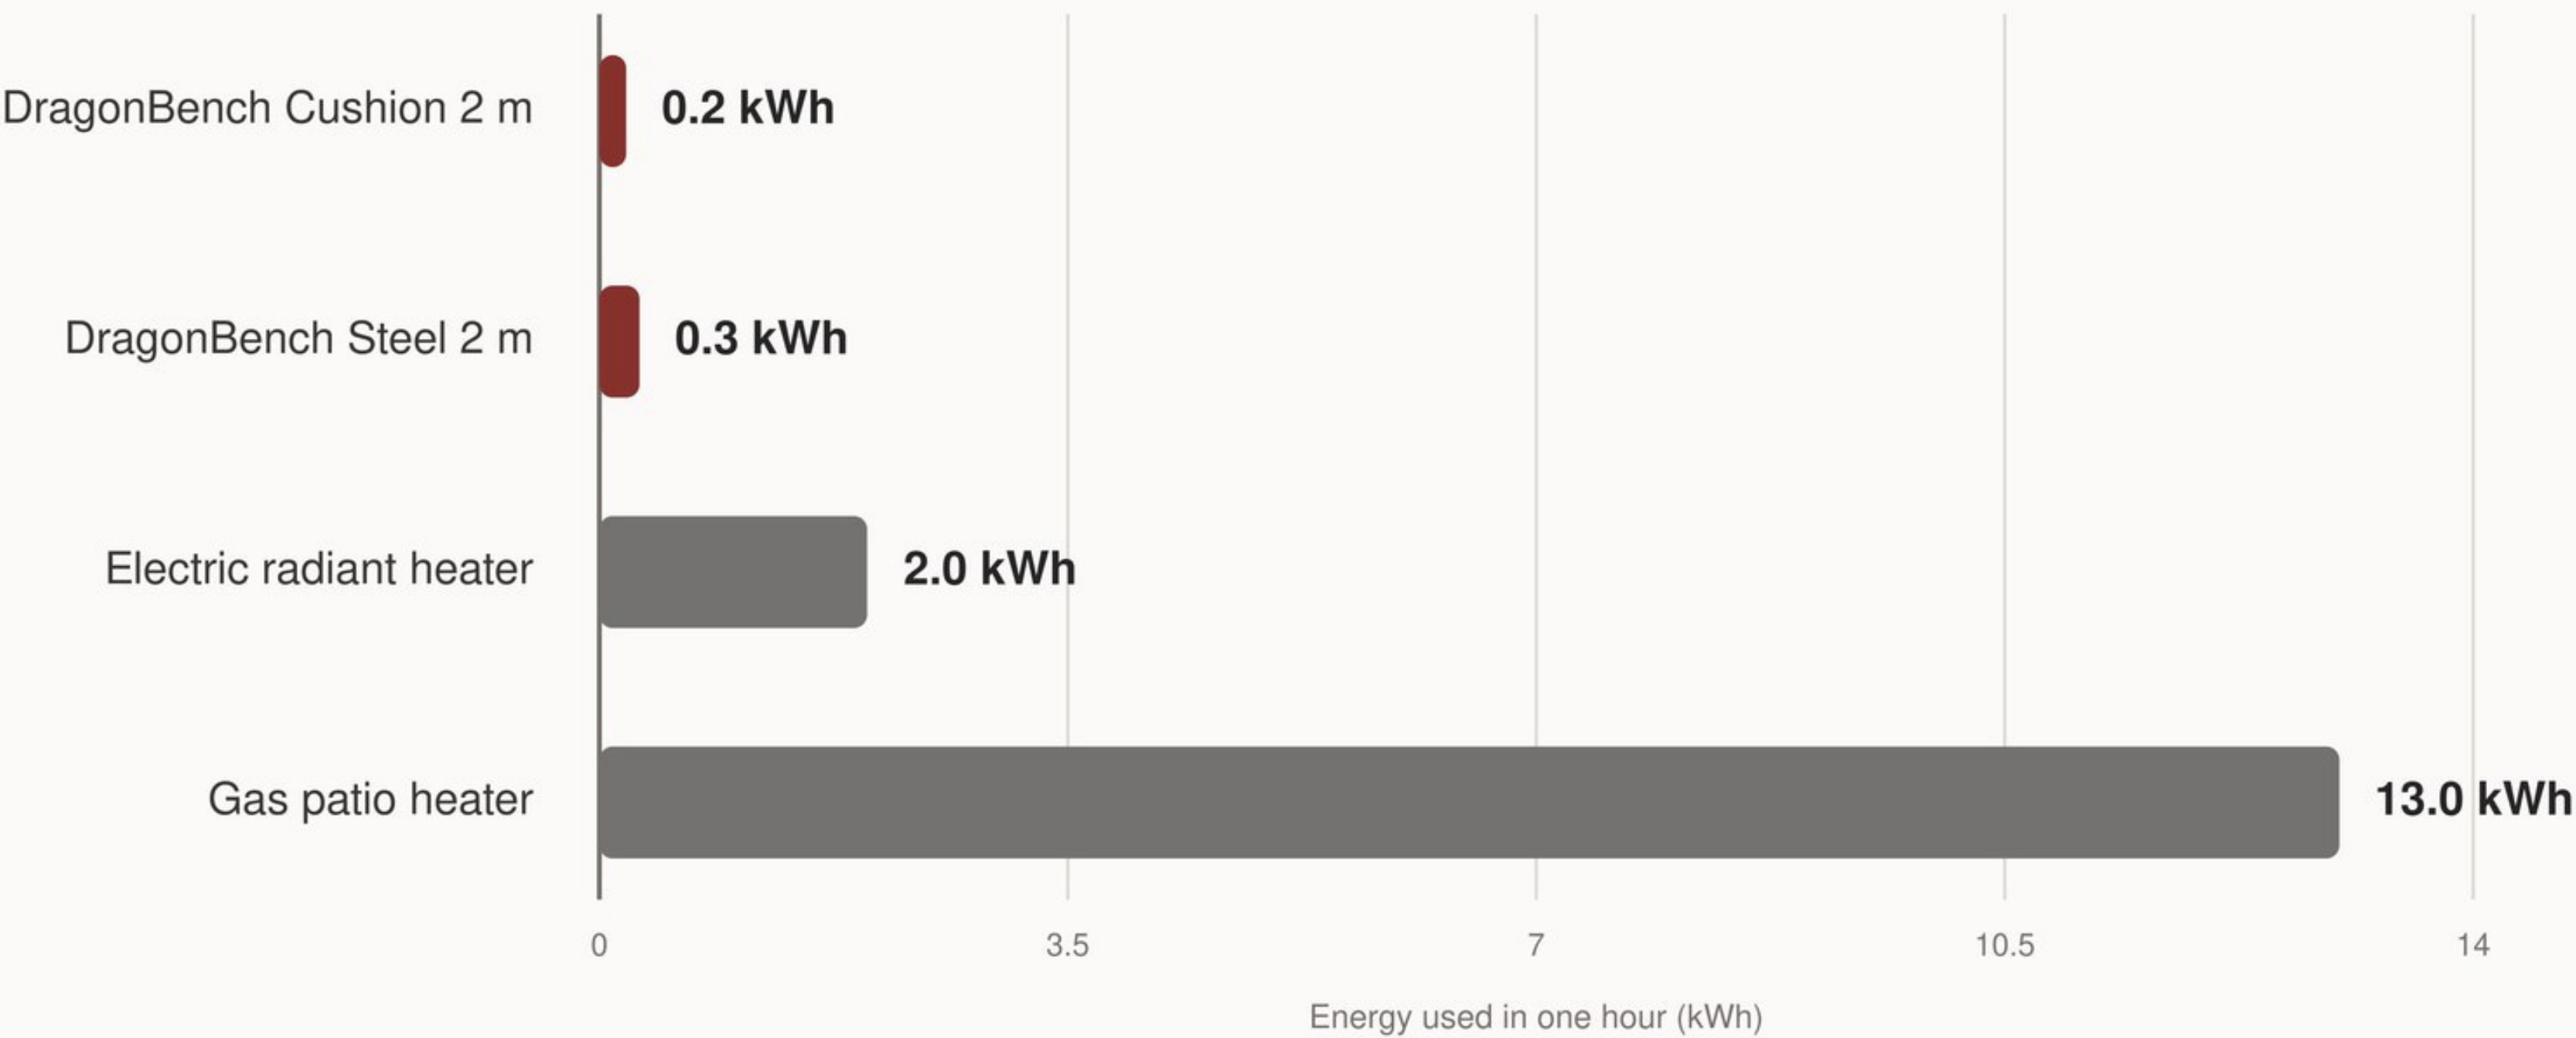

Heating the seat requires significantly less energy than heating the surrounding air. By using the seating surface itself, DragonBench concentrates energy where it is felt rather than trying to warm a changing outdoor environment.

The comparison below uses typical thermostatic consumption for DragonBench and continuous rated output for the comparison heaters.

DRAGONBENCH

Typical energy used in one hour

DragonBench 2 m seating compared with common outdoor heaters

● Even using the higher DragonBench figure: **85% less energy** than a 2 kW electric radiant heater and **around 98% less** than a 13 kW gas patio heater.

Representative hourly consumption. DragonBench values reflect typical thermostatic operation, not maximum connected load; comparison heaters assume continuous rated output. Actual use varies with conditions and settings.

Lower energy demand
Targeted heating uses less power.

Lower operating costs
Less energy is spent heating empty space.

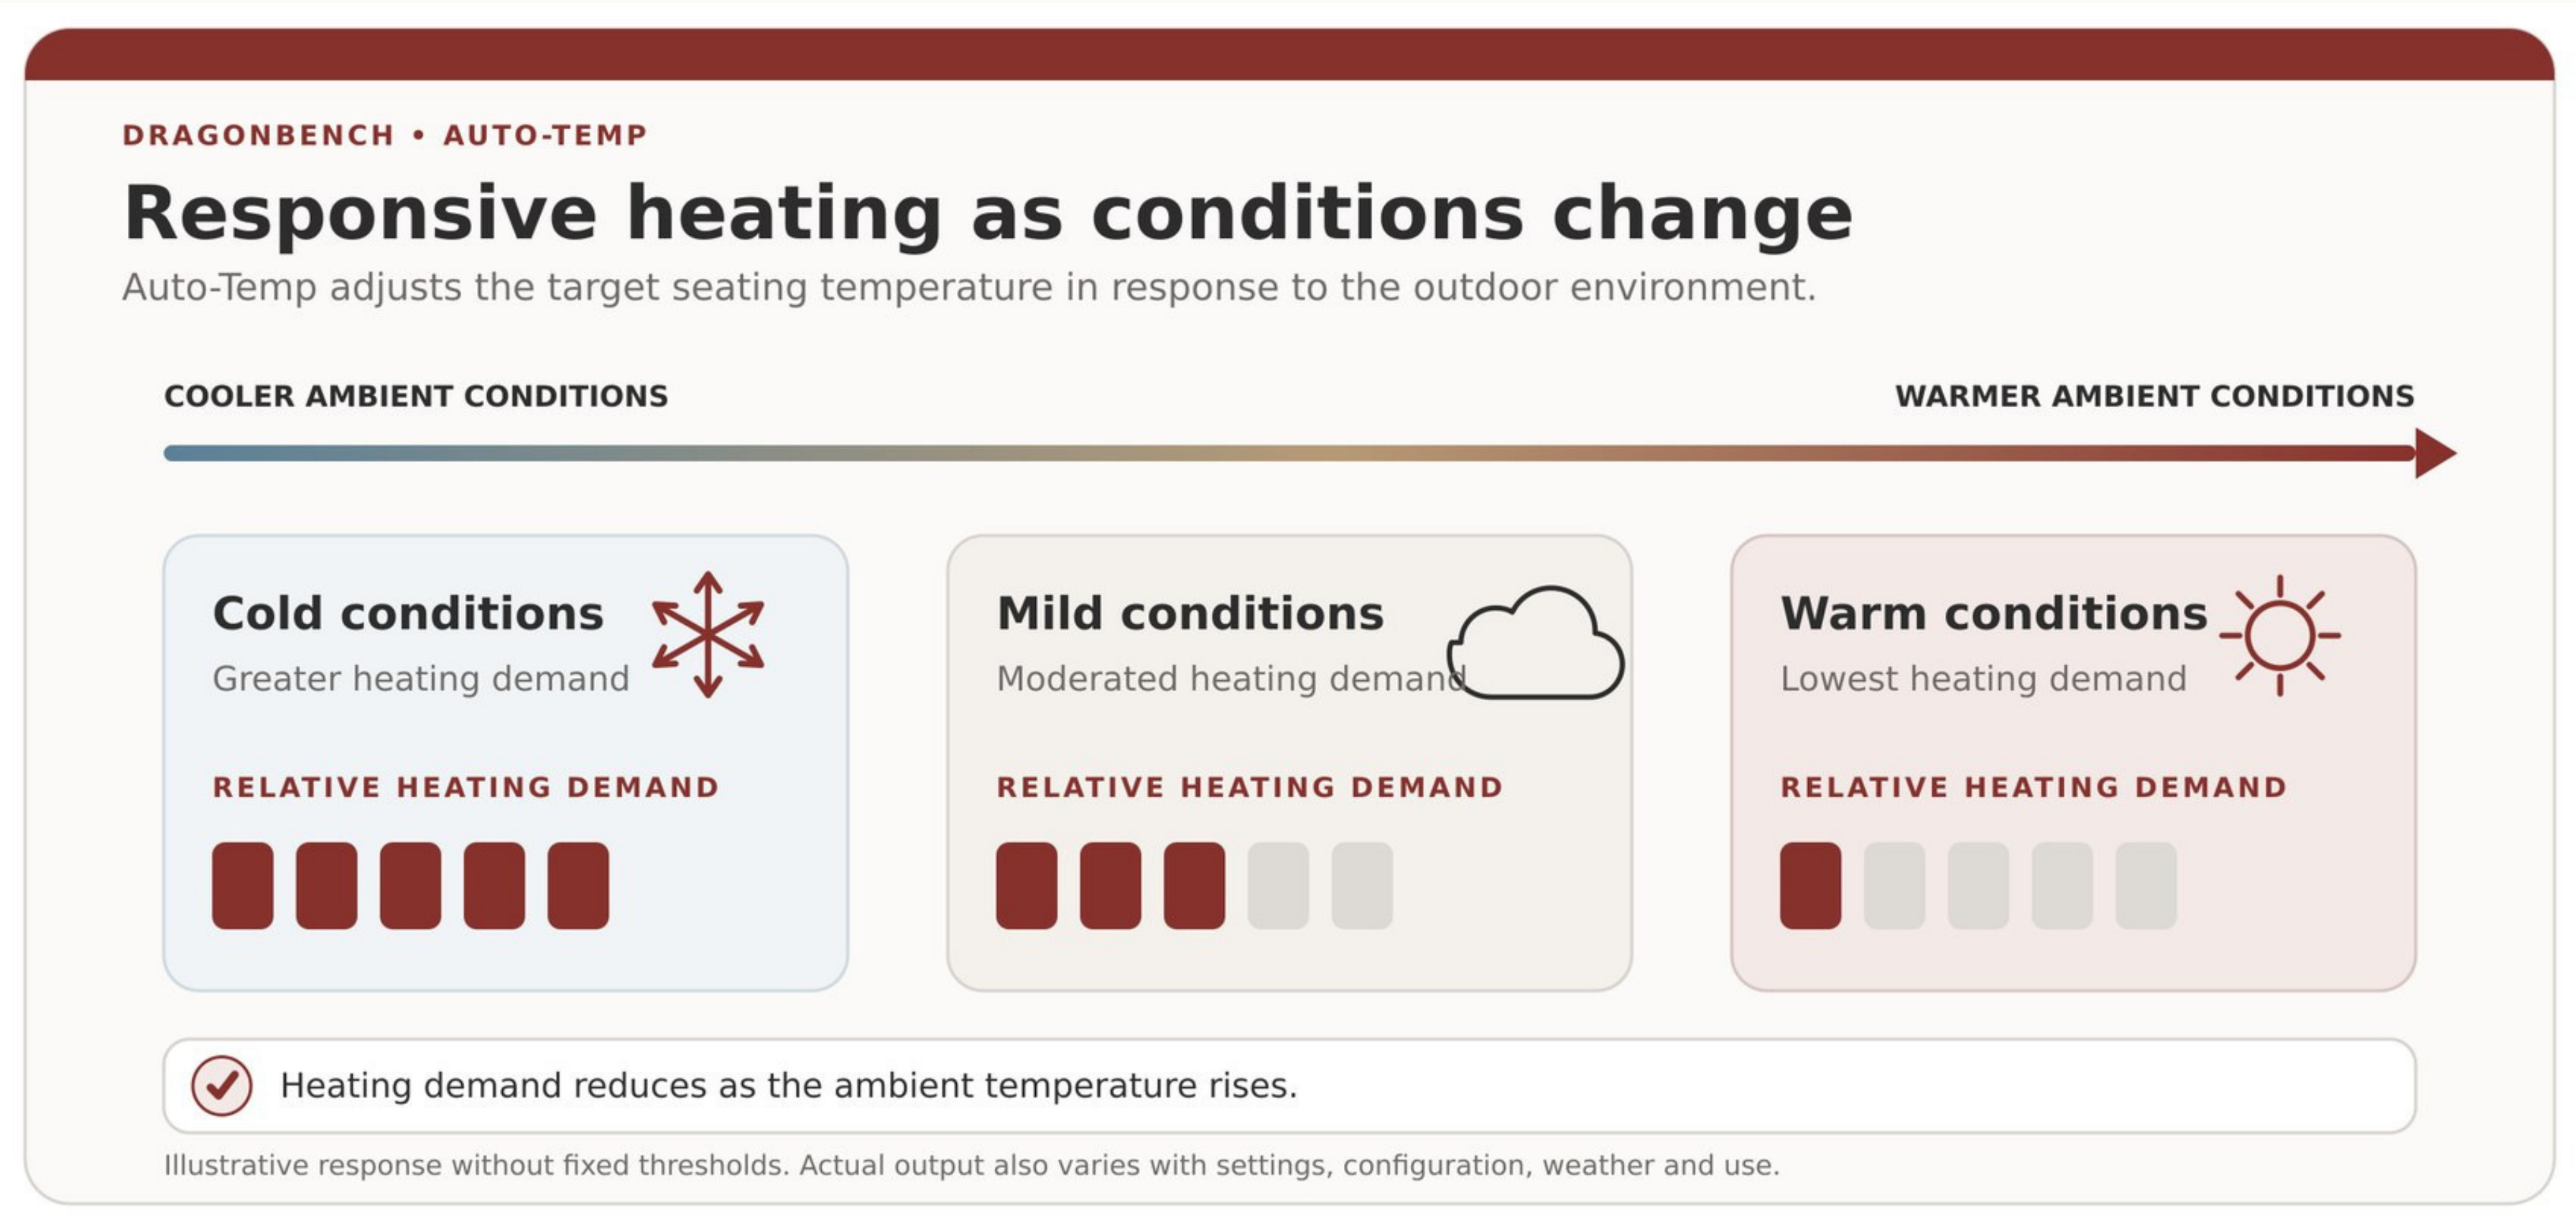

Reduced emissions
Lower demand can reduce associated emissions.

Intelligent control

Automatic temperature response requiring no manual adjustment.

Outdoor conditions can change quickly as a mild afternoon becomes a colder evening. A fixed-temperature system cannot respond, so the seating may feel too cool—or continue using more energy than necessary.

Auto-Temp adjusts the target seating temperature as ambient conditions change. It raises the warmth as conditions cool and reduces demand when they improve, maintaining comfort without staff input.

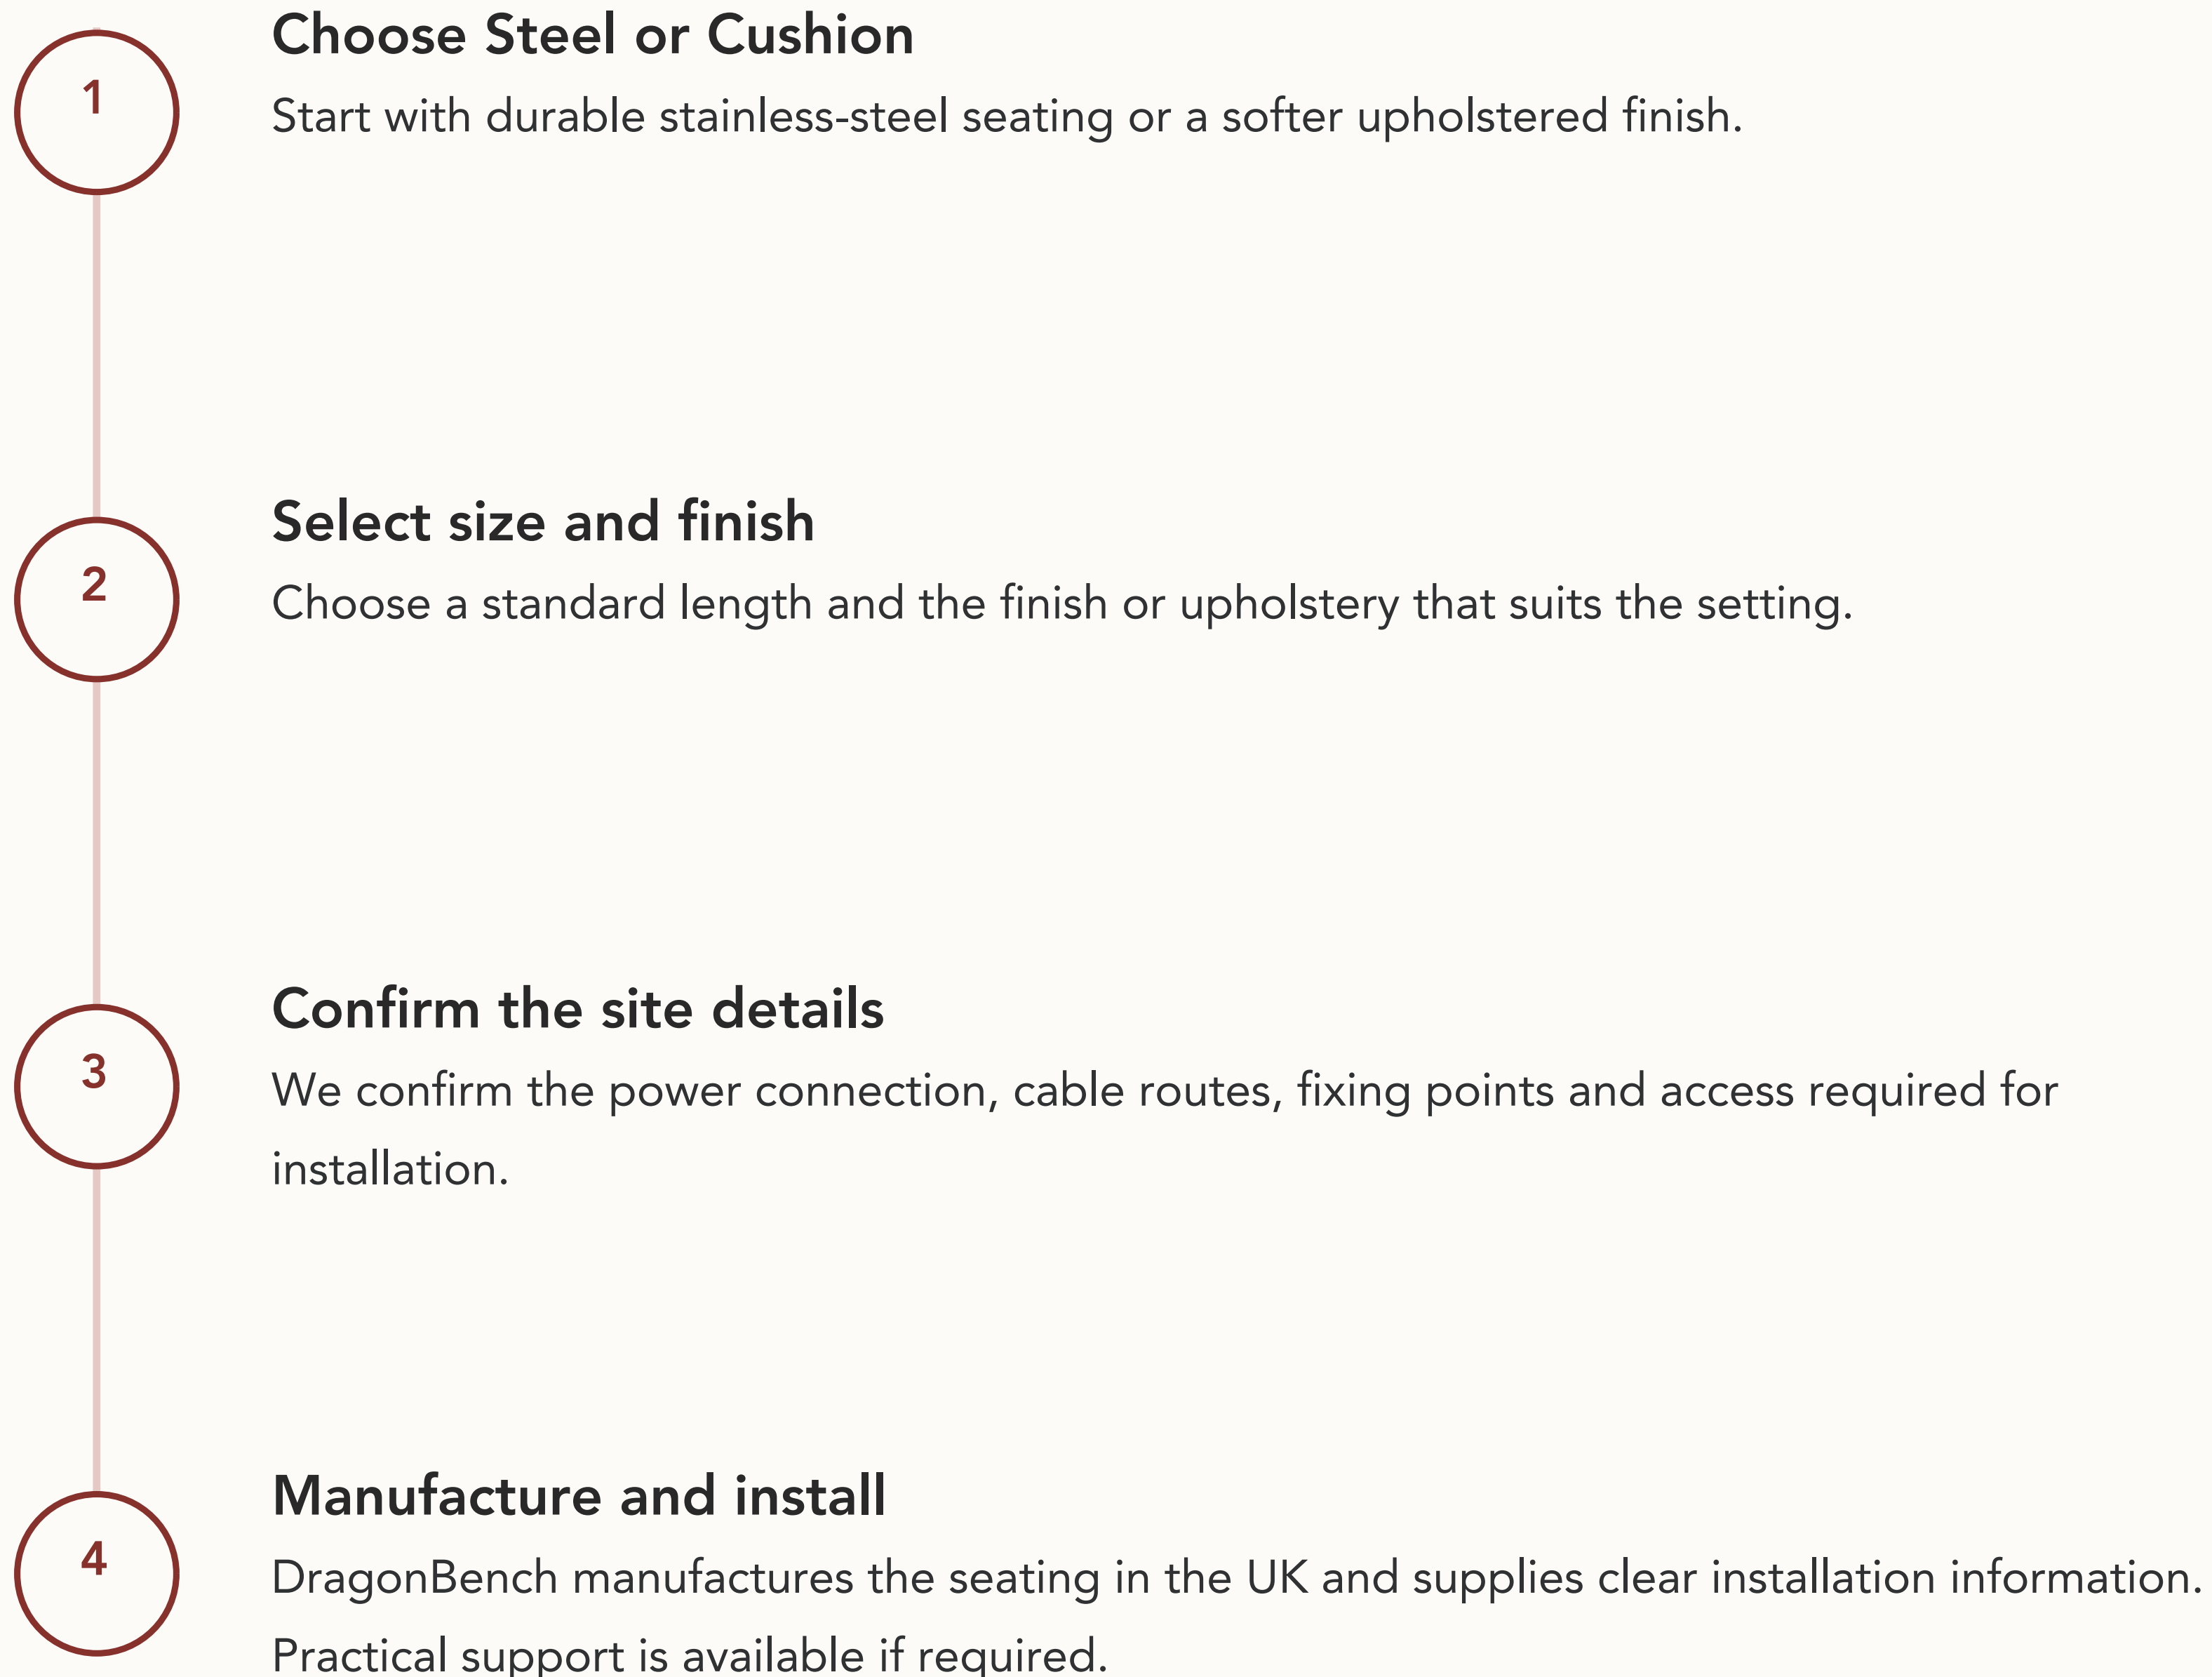

From selection to installation

Standard models are straightforward to specify, with extra support available when required.

Choose Steel or Cushion, then select the size and finish. We confirm the site details before manufacture. Custom dimensions and integration follow the same straightforward process, with any additional details determined at the outset.

A SIMPLE ROUTE TO YOUR DRAGONBENCH

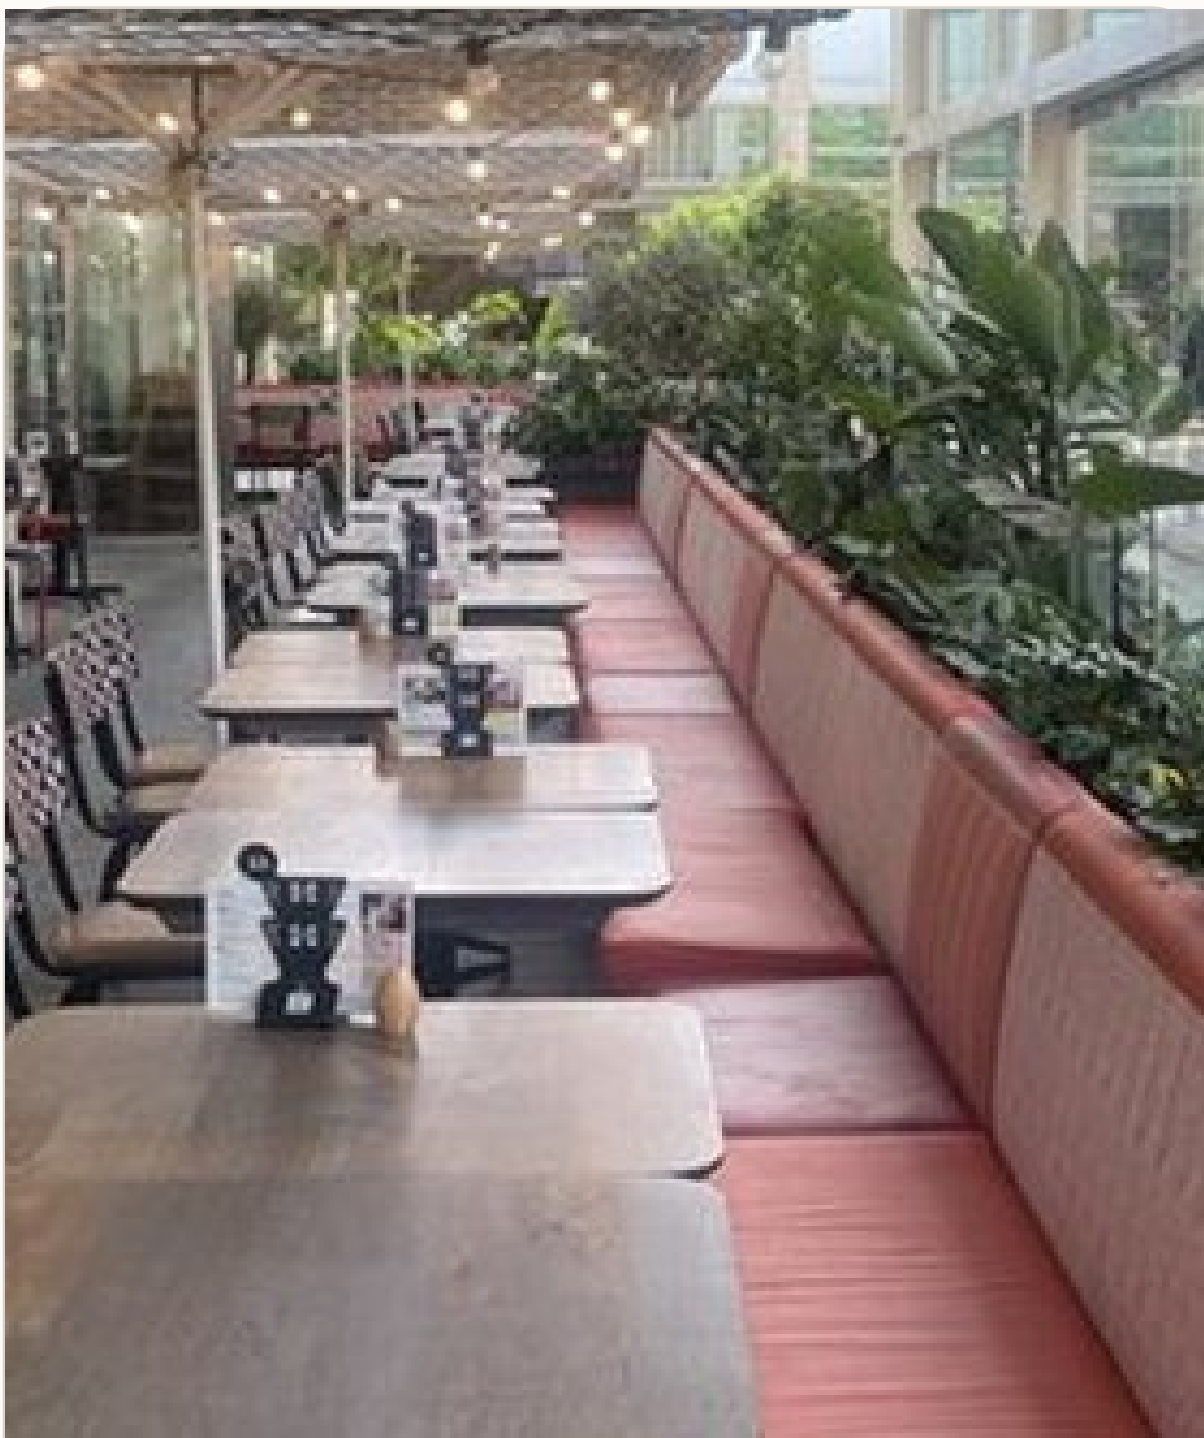

EVERY DRAGONBENCH SYSTEM INCLUDES

- Heated seat and backrest surfaces
- DragonBench controller and operating settings
- Installation drawings and practical guidance
- Temperature sensing and Auto-Temp control
- Coordinated wiring and junction-box arrangements
- Ongoing product and technical support

Custom dimensions and integration are available when needed.

Proven in real settings

Selected installations across hospitality, leisure and public environments.
